sheet 1:

Question(2) : descripe what happens if you omit the following in HelloWorld.java.
a)public=> public members are visible to all other classes.

b)static=> When you declare a variable or a method as static, it belongs to the class, rather than a specific instance. This means that only one instance of a static member exists, even if you create multiple objects of the class, or if you don’t create any. It will be shared by all objects.

c)void =>the method does not have a return type.

d)args=> An array (string class that stores java command line arguments)

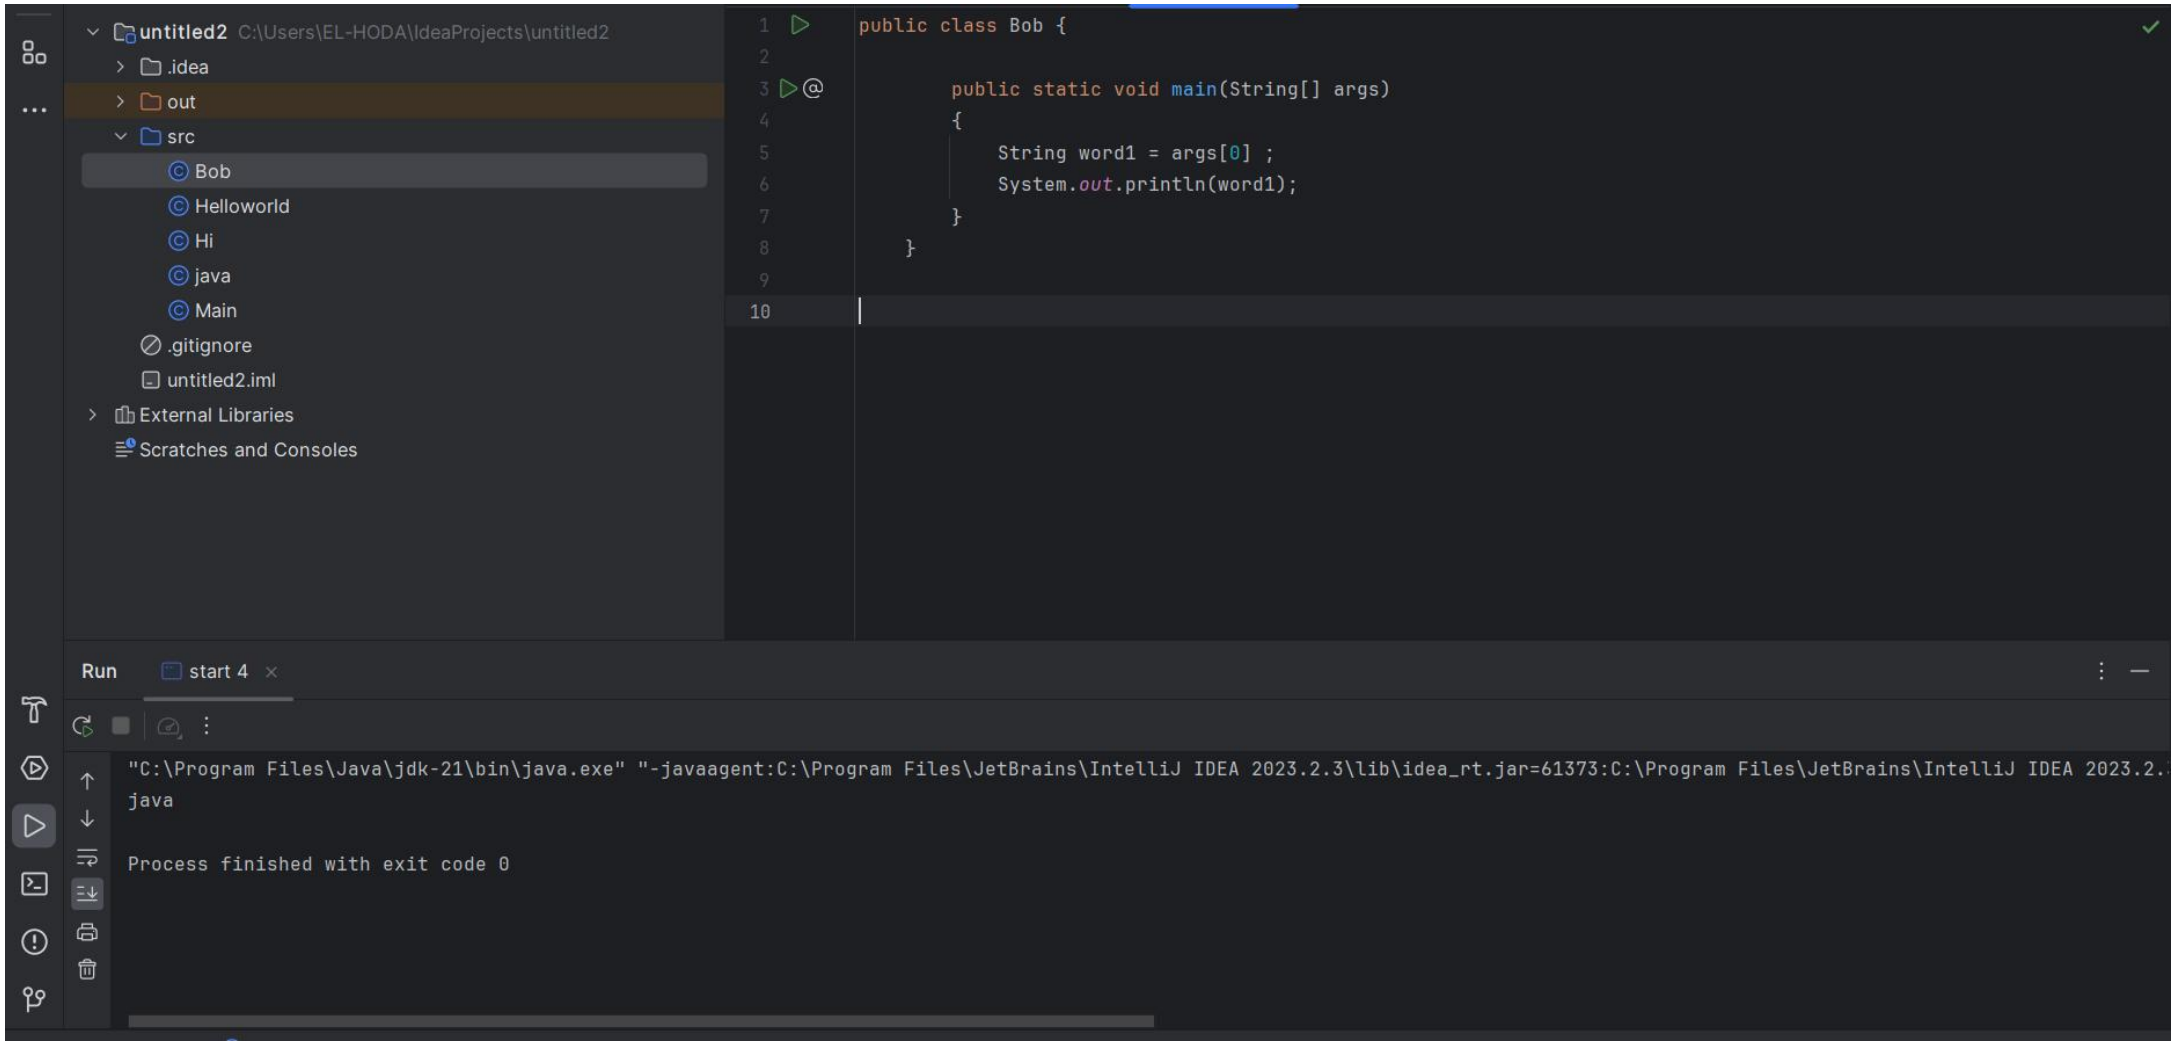

Question (3) : describe what happens if you misspell (by,say,omitting the second letter) the following in HelloWorld.java.

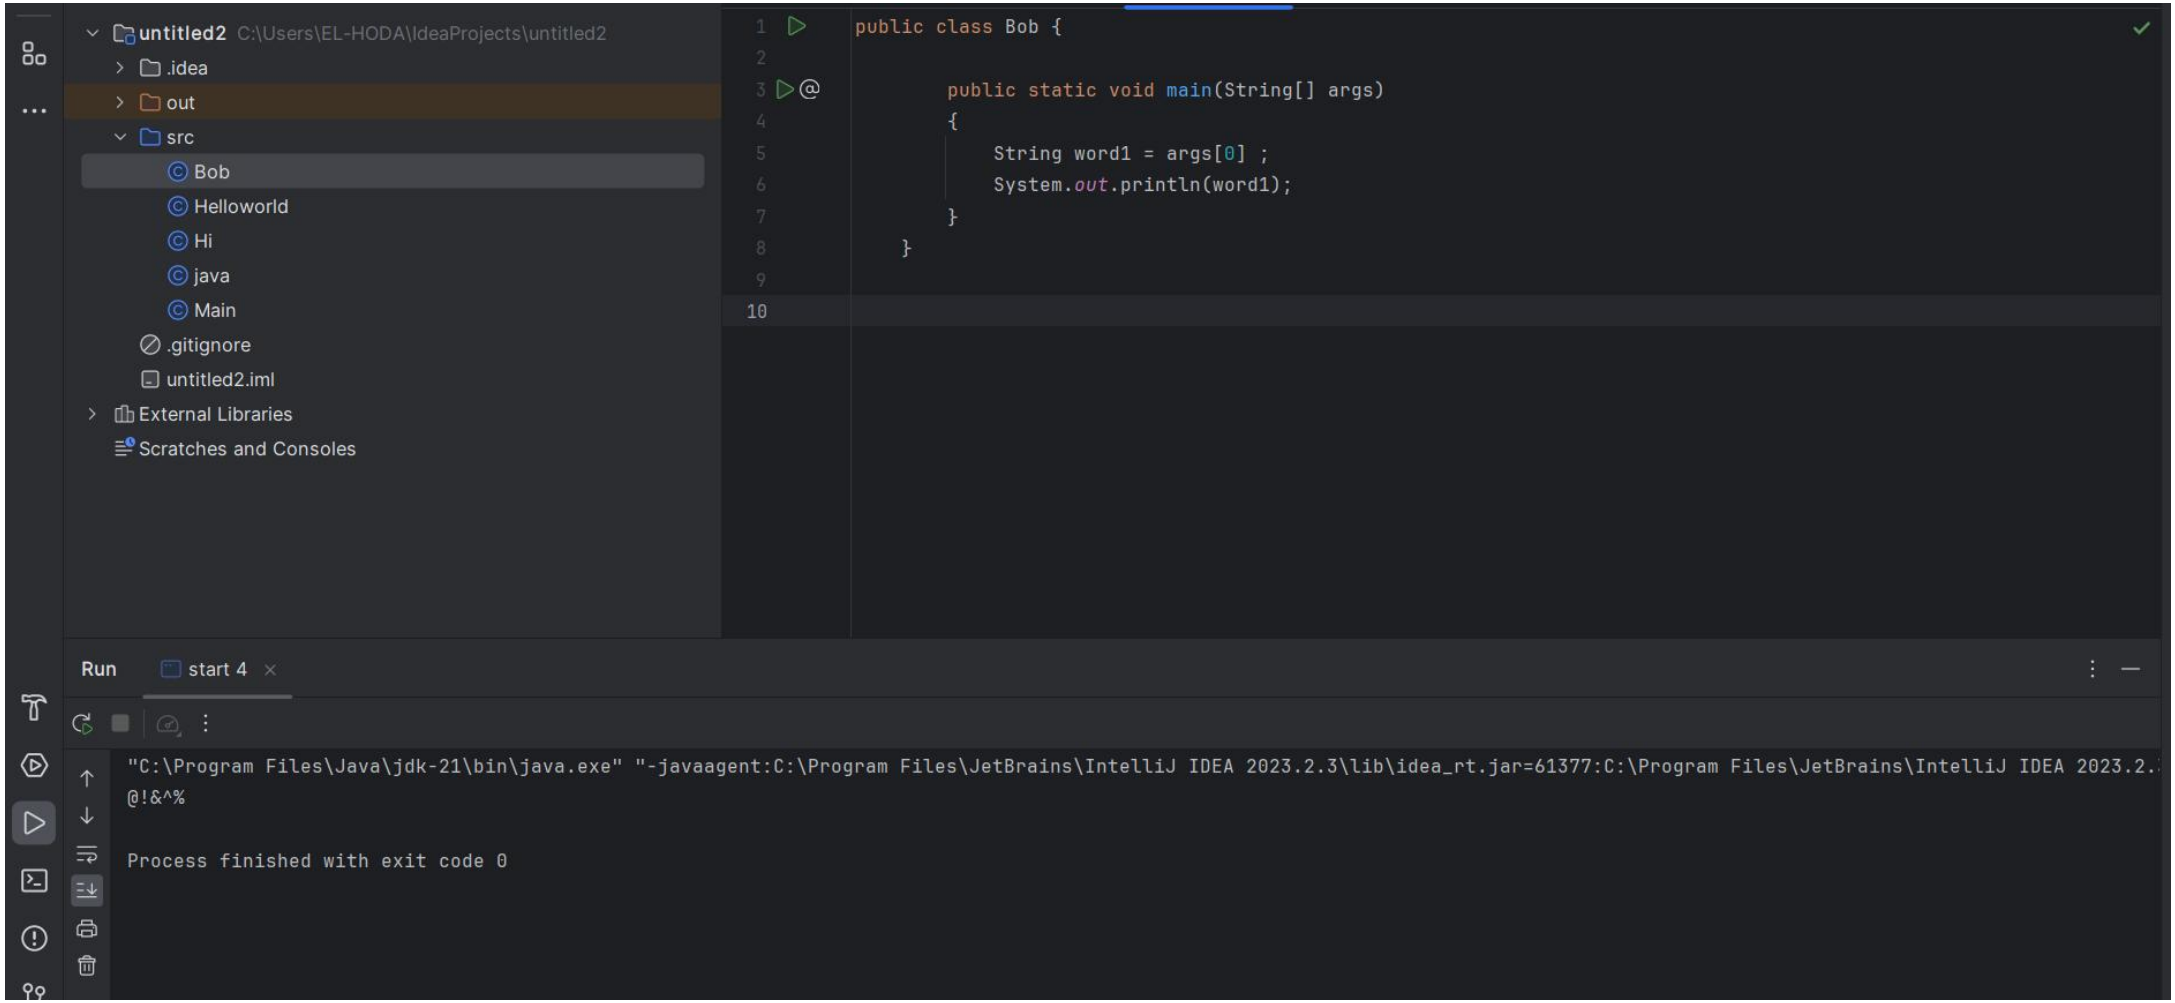

a)public=> syntax error

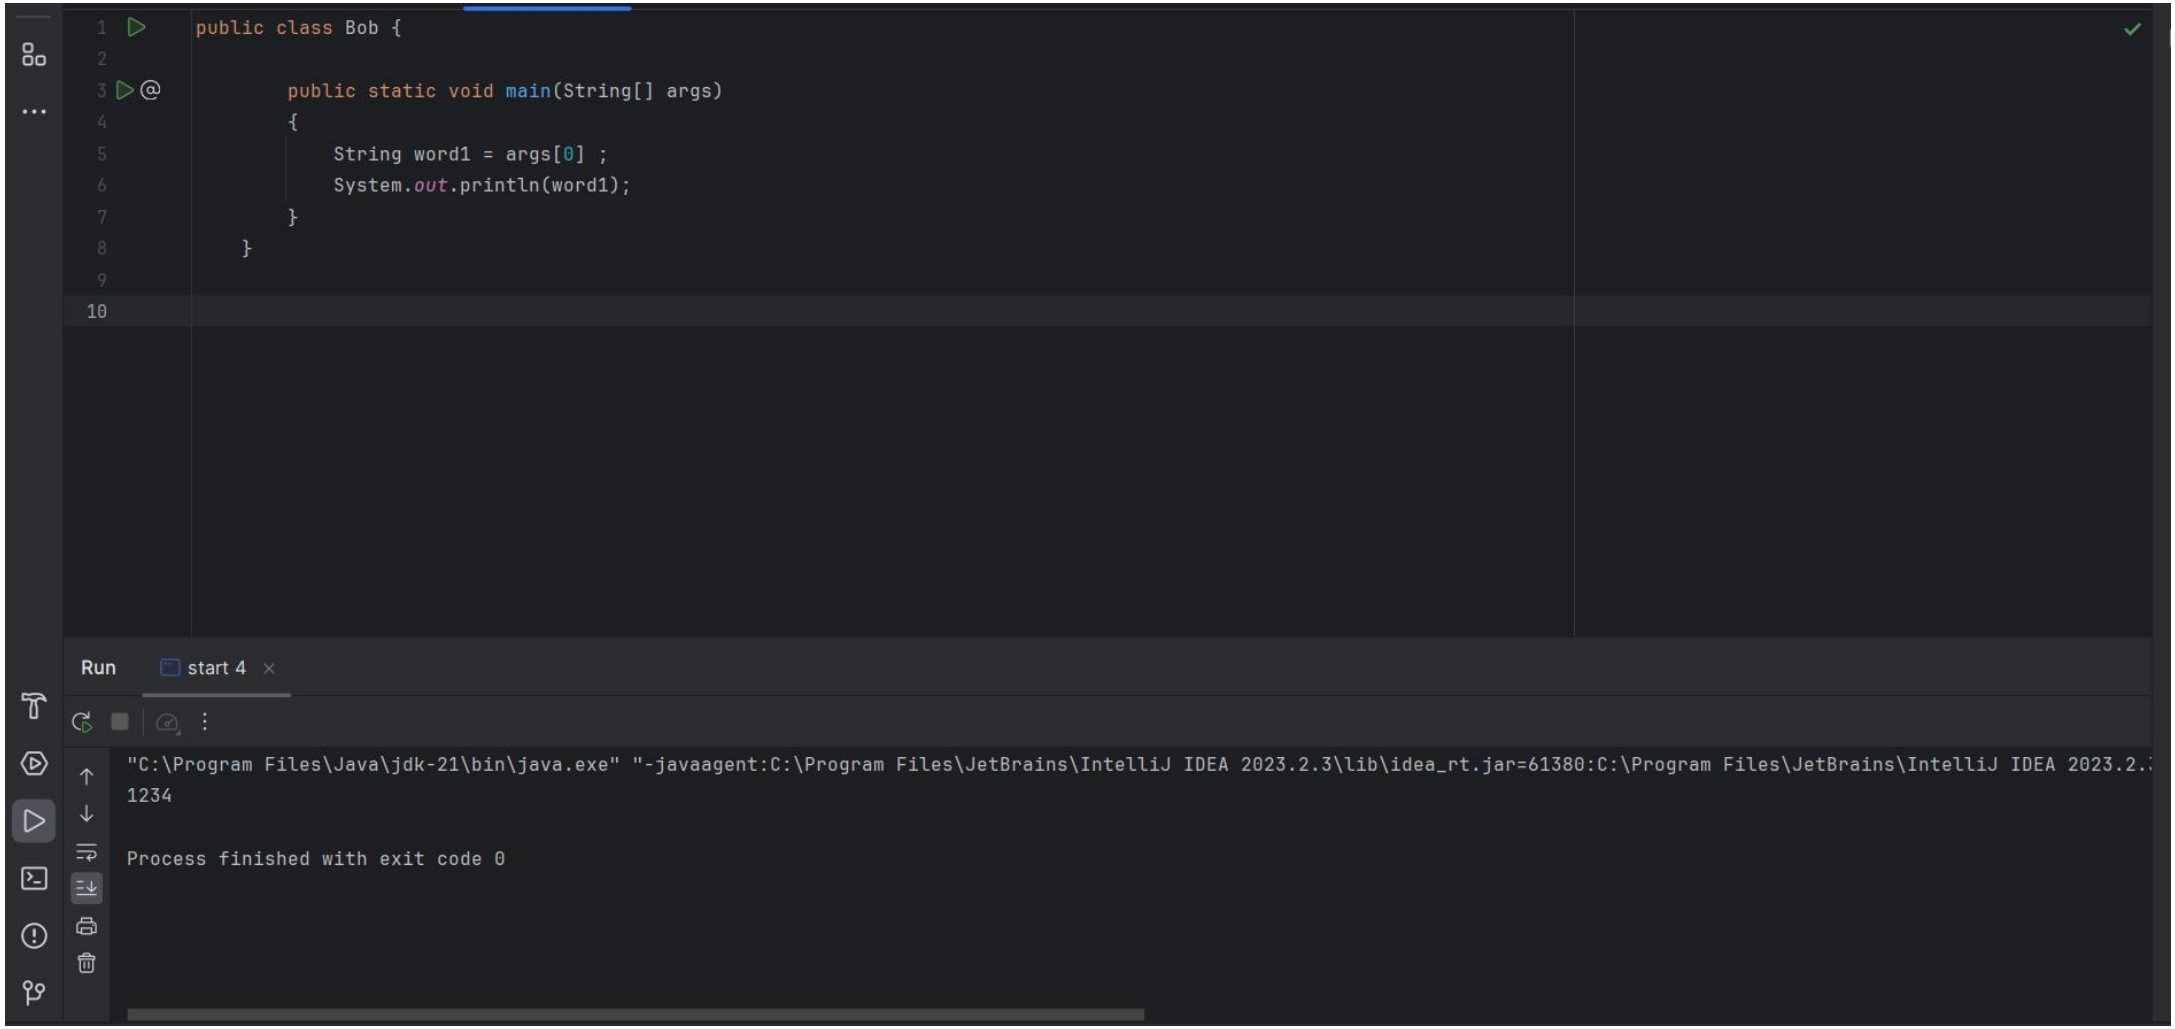

b)static=>syntax error

c)void =>syntax error

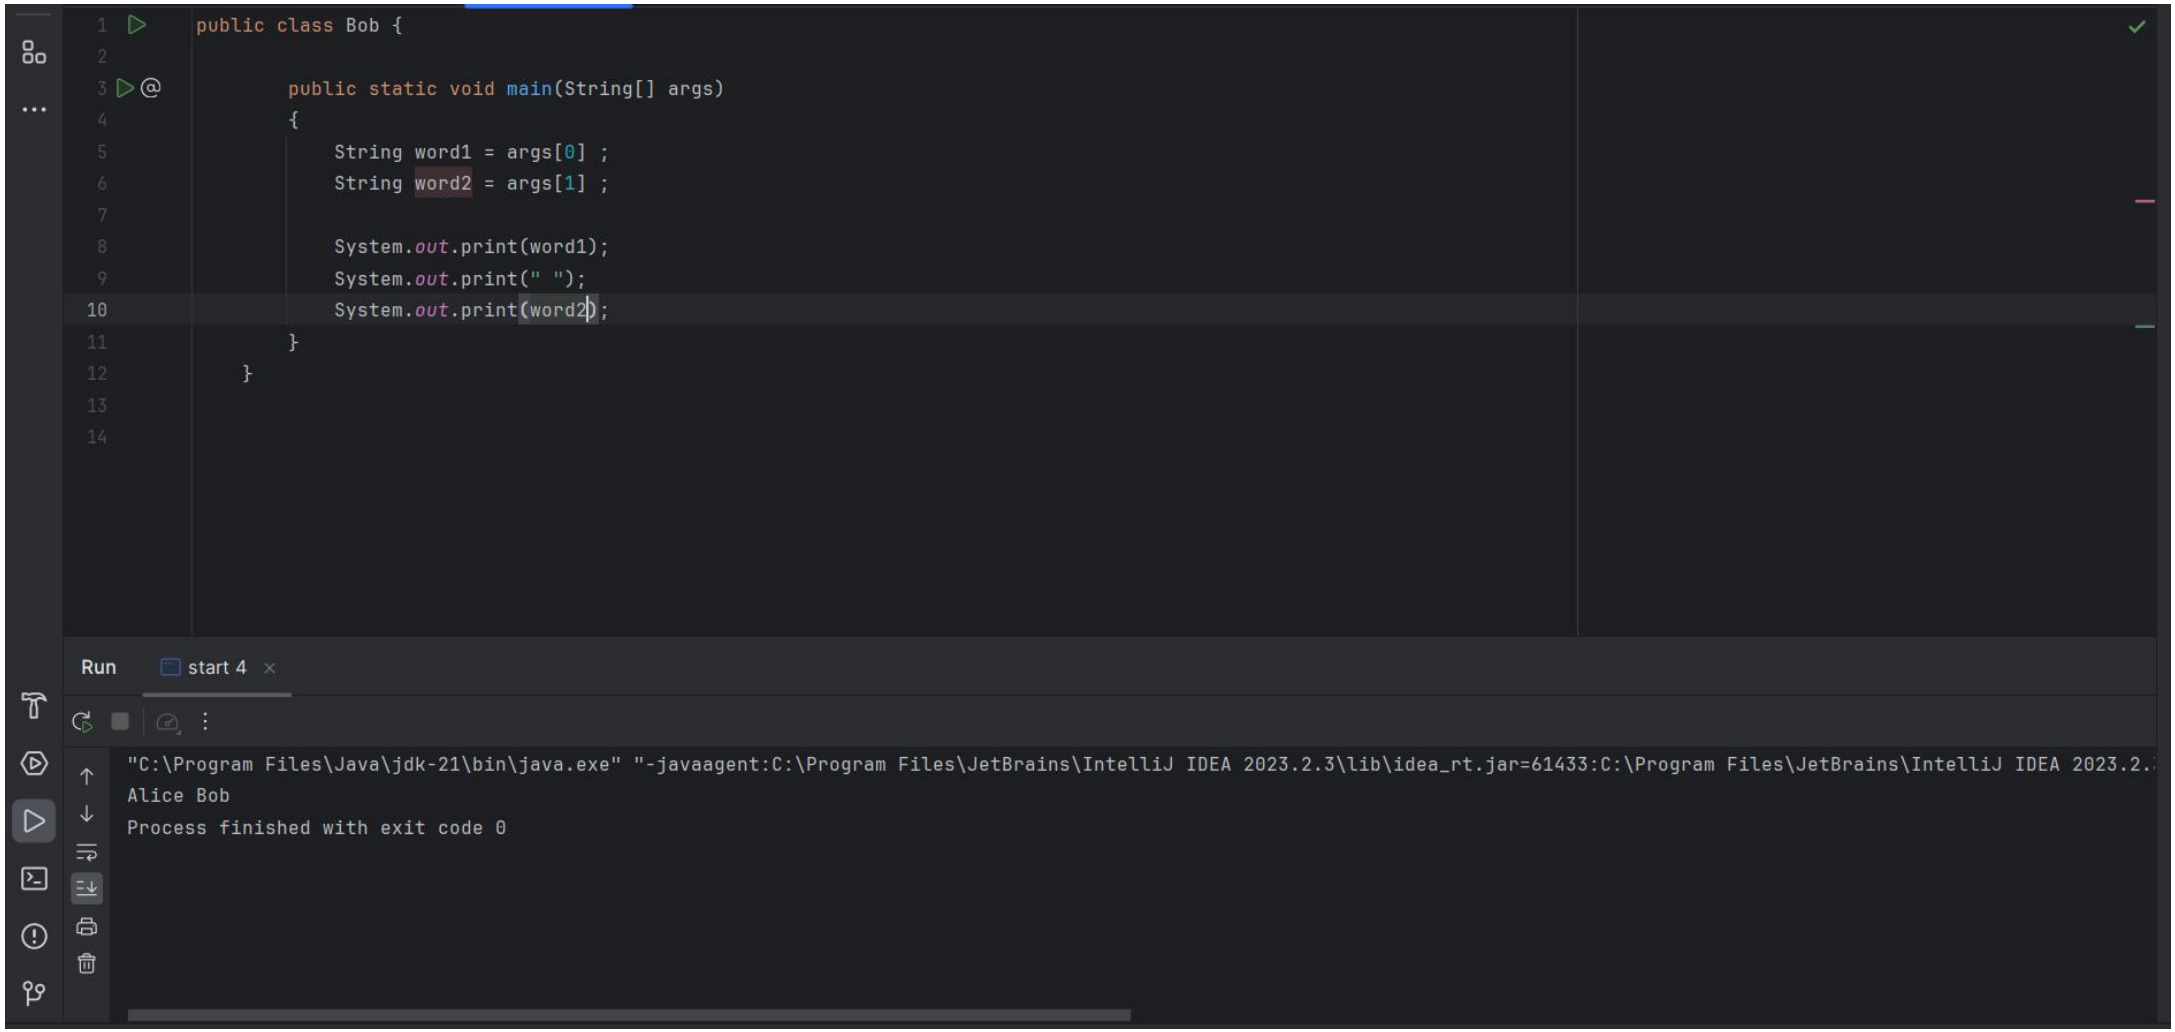

d)args=>syntax error
